

Spiders (Araneae) from Albania and Kosovo in the collection of Carl Friedrich Roewer

Blerina Vrenosi & Peter Jäger

doi: 10.5431/aramit4604

Abstract. The spider collection (Arachnida: Araneae) from Albania and Kosovo in the Senckenberg Research Institute, Frankfurt am Main is reviewed. A total of 122 adult specimens were found belonging to 73 species. Records of 48 species for Albania and 28 species for Kosovo, 20 of them new to Kosovo, are presented. Furthermore there are seven new country records for Albania: *Platnickina nigropunctata*, *Erigone remota*, *Tenuiphantes tenebricola*, *Pardosa agrestis*, *Callobius claustrarius* and *Zelotes femellus*. Additionally, *Pardosa cavannae* is the first record for the Balkan Peninsula. So far 381 species are known for Albania. A total of 106 species is known from Kosovo now; a list of the 86 spider species formerly known to Kosovo is included.

Keywords: Balkan fauna, checklist, new records

The Arachnida collection in the Senckenberg Research Institute, Frankfurt, Germany, dates from 1833 when the spider collection of Karl Friedrich Wider was donated to the Senckenberg Natural History Museum (Kraus 2006). Since then Carl Koch, Philipp Bertkau, Wilhelm Dönitz, Wilhelm Bösenberg, Embrik Strand, Ludwig Koch, Friedrich Dahl and other arachnologists deposited material in the Senckenberg collection. However, the main contribution to this collection was made by Carl Friedrich Roewer and Hermann Wiehle. Today the arachnological collection is one of the most important in the world, and includes more than 77,000 series identified to species level including about 12,000 type series.

Spiders from Albania and Kosovo (previously part of Yugoslavia resp. Serbia) are included in the collection of Carl Friedrich Roewer. Formerly, there was no differentiation between these two countries due to historical and political reasons. Therefore all material labelled as from Albania was examined. This collection includes significant data of spiders collected in northeast and southeast Albania, which were partly published by Deltshev et al. (2011) and therefore raised the interest of the first author. New country records not published before were of great importance for starting this investigation. This present paper contributes to the checklist of Albanian spi-

ders. Additionally, some records for Kosovo based on the Roewer collection and from a critical review of Deltshev et al. (2003) are given. The present paper complements an on-going series of papers on Albanian spiders (Vrenosi & Haxhiu 2008, Deltshev et al. 2011, Vrenosi 2012, Vrenosi & Jäger 2012, Vrenosi & Dunlop 2013).

Methods

The material presented here derives from the collection of Carl Friedrich Roewer, which is deposited in the Senckenberg Research Institute in Frankfurt am Main (SMF). It was collected between 1917 and 1961 in the north-eastern and south-eastern areas of Albania and in Kosovo (Fig. 1). In some cases, data for several specimens taken from the SMF card files lacked the year of collection and who identified it. All specimens in the Roewer collection were reviewed at the end of 2010.

Furthermore, localities in Kosovo mentioned in Deltshev et al. (2003) in the Serbian language are revised and Albanian names as well as geographical coordinates are given.

The main literature used for identification was Grimm (1985), Heimer & Nentwig (1991), Metzner (1999), Nentwig et al. (2013) and Roberts (1987, 1995). Nomenclature and order of families in the species lists follows Platnick (2013). The data concerning the general distribution are taken from Platnick (2013) and Helsdingen (2012).

Data on elevation, latitude and longitude are taken from <http://wikimapia.org>, <http://en.wikipedia.org> and <https://maps.google.com>.

Abbreviations

- det. – determinavit (Latin for “he/she has identified”)
- ex RII – previous RII vial is separated into two series, one keeps the old RII number, the other (present) gets a new SMF number
- leg. – legit (Latin for “he/she has collected”)
- rev. – revidit (Latin for “he/she has reviewed”, here: changed previous identification)
- RII – second (larger) part of the Roewer collection [e.g., SMF 9900828 is the collection number for RII 828]
- SMF – Senckenberg Research Institute, Frankfurt
- vid. – vidit (Latin for “he/she has seen, examined”; here: confirmed previous identification)

Zvečan [Zvečan, municipality near Mitrovicë], 712 m a.s.l., N 42°58'17", E 20°48'04".

Results

In total, 126 specimens of spiders including 98 females, 24 males and four juveniles were examined, comprising 73 species from 52 genera and 18 families, from which 48 species from 38 genera and 15 families were from Albania (Tab. 1). One female of *Nomisia* sp. could not be identified to species level until more specimens, including males and females, are found. Seven new records presented in this paper were found in north-eastern areas of Albania (marked with * in Tab. 1):

Platnickina nigropunctata has a Mediterranean distribution, known so far from Greece, Italy and the western Mediterranean. This record extends the known distribution range to the Balkan Peninsula. In Albania one male was recorded.

Erigone remota is a typical high mountain species with a Palearctic distribution. This species is known in the Balkan Peninsula only from Macedonia and Romania. One female was collected by Roewer on 19.10.1917, in the Mt. Gjallica e Lumës.

Tenuiphantes tenebricola is widely spread in the Palearctic region. This record extends our knowledge about its distribution in the Balkan Peninsula, where it was known before in every surrounding country, except Macedonia and Greece. In Albania one male was recorded.

Pardosa agrestis is widely spread in the Palearctic region. The present record fills a gap extending its distribution range into Albania, as it was previously known from all surrounding countries except Bosnia and Herzegovina. Seven females were recorded in Albania.

Pardosa cavannae was known before only in the National Park of Majella, Province of L'Aquila in Italy. This record is the first find for the Balkan Peninsula, the identification of which was confirmed by C. Deltshev. Following Tongiorgi (1966), this species is known from the high mountains. One female was recorded in Albania, identified by Wunderlich in 2008.

Callobius claustrarius has a Palearctic distribution, except the United Kingdom, Iberian Peninsula, Scandinavia, and the Far East where is found only in the Asian parts of Russia. In the Balkan Peninsula *C. claustrarius* is known from Macedonia, Greece, Bulgaria and Romania. Two females were collected in 1928 in the Mt. Gjallica e Lumës.

Zelotes femellus is distributed in southern Europe, where it is known from Spain, Corsica (France), Italy and Ukraine. In the Balkan Peninsula it is found in Croatia, Greece and Romania. One subadult male and one female were collected in 1927 in the Kulla e Lumës, which were confirmed by C. Deltshev.

Records of 28 species from 20 genera and nine families were collected in Kosovo (Tab. 1). Twenty species are recorded for Kosovo for the first time

Tab. 1: List of the spider species and specimens of Roewer's collection from Albania and Kosovo. * = first record for Albania, ** = first record for Kosovo.

Family/Species	Material examined
Pholcidae

<i>Xysticus kochi</i> Thorell, 1872	1♀, Kosovo, Pejë, leg. 1929, Jantscher rev. 11.1999, Vrenozì & Jäger vid. (RII 1643)
<i>Xysticus graecus</i> C.L. Koch, 1838	1♀, Albania, Gostil, leg. 1929, sub <i>Xysticus striatipes</i> L. Koch, 1870, Vrenozì & Deltshv rev. (RII 1663)
Salticidae	
<i>Evarcha falcata</i> (Clerck, 1757)	5♂, 2♀, Albania, Kulla e Lumës, leg. 1930, sub <i>Evarcha blancardi</i> (Scopoli 1763), Vrenozì & Jäger vid. (ex RII 2075; SMF 9902075)
** <i>Heliophanus auratus</i> C.L. Koch, 1835	2♀, Kosovo, Pejë, Roewer leg. 6.1921, Logunov det. 2005, Vrenozì & Jäger vid. (ex RII 1993; SMF 9901993); 1♀, Kosovo, Pejë, Logunov det. 2005, Vrenozì & Jäger vid. (ex RII 1995; SMF 9901995)
<i>Heliophanus cupreus</i> (Walckenaer, 1802)	2♀, Kosovo, Pejë, leg. 1930, Vrenozì & Jäger vid. (RII 1978)
<i>Heliophanus flavipes</i> (Hahn, 1832)	2♂, Kosovo, Pejë, leg. 1930, sub <i>Heliophanus ritteri</i> (Scopoli, 1763), Vrenozì & Jäger vid. (RII 1982); 1♀, Kosovo, Pejë, Logunov det. 2005, Vrenozì & Jäger vid. (ex RII 1995; SMF 40467)
<i>Heliophanus lineiventris</i> Simon, 1868	1♀, Albania, Mt. Korab, Logunov det. 2005, Vrenozì & Jäger vid. (ex RII 1987; SMF 57337)
<i>Heliophanus simplex</i> Simon, 1868	1♀, Albania, Kulla e Lumës, Logunov det. 2005, Vrenozì & Jäger vid. (ex RII 1994; SMF 57318)
<i>Mendoza canestrinii</i> (Ninni, 1868)	2♀, Albania, Mt. Koritnik, leg. 7.1922, Vrenozì & Jäger vid. (RII 2026)
<i>Philaeus chrysops</i> (Poda, 1761)	2♀, Albania, Koritë, leg. 1930, Vrenozì & Jäger vid. (RII 2049)
** <i>Phegra fasciata</i> (Hahn, 1826)	1♀, Kosovo, Bellopojë, leg. 1930, Vrenozì & Jäger vid. (RII 2056)
<i>Sitticus pubescens</i> (Fabricius, 1775)	1♀, Kosovo, Pejë, leg. 1930, Vrenozì & Jäger vid. (RII 2011)
** <i>Synageles dalmaticus</i> (Keyserling, 1863)	2♂, 1♀, Kosovo, Bellopojë, leg. 1930, Vrenozì & Jäger vid. (RII 1999)

(marked with ** in Tab. 1). Almost all these species are found in the adjacent countries of Kosovo (Nikolić & Polenec 1981, Nentwig et al. 2013; and several papers on Albanian spiders such as Vrenozi & Haxhiu 2008, Deltshev et al. 2011, Vrenozi 2012, Vrenozi & Jäger 2012), except for the two species *Lycosoides coarctata* and *Synageles dalmaticus*, which are recorded only from Macedonia. *Berlandina plumalis* with a distribution from West Africa to Central Asia (Platnick 2013) is the first record for the region and the second record for the Balkan Peninsula after Greece (Nentwig et al. 2013).

The revised paper of Deltshev et al. (2003) documented 86 species from Kosovo. Spiders are cited by different authors, mostly for Mt. Kopaunik in the northern part of Kosovo (40 species), followed by the areas of Pejë and Prizren districts in the north-western and western part, near the Albanian borders (respectively 20 and 23 species), and Prishtinë in the eastern part of Kosovo (22 species); meanwhile Nerodime, the Monastery of Deçan, Mitrovicë, Crni Kamen (Mt. Sharr) and Kaçanik, are the less cited municipalities and districts. Almost 50% of all spiders known from Kosovo were mentioned by Stojićević (1929) and Drensky (1936) (Tab. 2).

Discussion

Previously, 374 spider species were known for Albania (Deltshev et al. 2011: 335 species, Vrenozi 2012: 6 species, Vrenozi & Jäger 2012: 32 species, Vrenozi & Dunlop 2013: 1 species). The Roewer collection offers seven new records for the Albanian spider fauna; thus 381 species are now known for this country.

According to Nikolić & Polenec (1981), only three species were known for Kosovo before: *Robertus arundineti* (O. P.-Cambridge, 1871), *Styloctetor stativus* (Simon, 1881) (sub *Anacotyle stativa*) and *Trichoncus affinis* Kulczyński, 1894. Deltshev et al. (2003) mentioned 86 species for Kosovo which were known for the districts of Deçan, Ferizaj, Gjiilan, Kaçanik, Mitrovicë, Pejë, Prishtinë, Prizren, Mt. Kopaunik and Mt. Sharr. From these, 25 spider species are known only from Mt. Kopaunik, without a precise locality. Nevertheless this mountain is part of both Kosovo and Serbia, these species are thus considered as records for Kosovo and Serbia at the same time. The present review of the Roewer collection has resulted in 28 records, with eight species known before for Kosovo: *Araniella cucurbitina* (Clerck, 1757), *Inermocoelotes inermis* (L. Koch, 1855), *Synema globosum* (Fabricius, 1775), *Thomisus onustus* Walckenaer, 1806, *Xysticus kochi* Thorell, 1872, *Heliophanus cupreus* (Walckenaer, 1802), *Heliophanus flavipes* (Hahn, 1832) and *Sitticus pubescens* (Fabricius, 1775). The 20 other records are new to Kosovo. All species were recorded in the north-western and western areas, near the Albanian border. These species increase the number of spider species known so far from Kosovo to 106.

Acknowledgements

We thank Theo Blick from the Senckenberg Research Institute in Frankfurt/M. for his assistance during the revision of some species; Dr. Barbara Knoflach-Thaler and Dr. Robert Bosmans for providing literature; Prof. Dr. Perikli Qiriazi, Prof. Dr. Aleko Miho and Prof. Dr. Lulzim Shuka of the Tirana University for checking some old names of the geographic areas. B.V. kindly acknowledges the Sencken-

Tab. 2: List of the spider species from Kosovo according to Deltshev et al. (2003).

Nr.	Family/Species	Locality (References)
	Atypidae	
1	<i>Atypus piceus</i> (Sulzer, 1776)	Prizren (Stojićević 1929)
	Dysderidae	
2	<i>Dasumia kusceri</i> (Kratohvil, 1935)	Crni Kamen, Mt. Sharr (Nikolić & Polenec 1981)
	Theridiidae	
3	<i>Asagena phalerata</i> (Panzer, 1801)	Sazli (Stojićević 1929), . Zhljeb (Knoflach 1996)
4	<i>Crustulina guttata</i> (Wider, 1834)	Sazli (Stojićević 1929)
5	<i>Enoplognatha ovata</i> (Clerck, 1757)	Lubiqevë (Bresjančeva 1907, Drensky 1936)

	Salticidae	
78	<i>Dendryphantas rudis</i> (Sundevall, 1833)	Lebanë (Stojićević 1929)
79	<i>Evarcha falcata</i> (Clerck, 1757)	Prizren (Stojićević 1929)
80	<i>Heliophanus cupreus</i> (Walckenaer, 1802)	Mt. Kopaonik (Drensky 1936)
81	<i>Heliophanus flavipes</i> (Hahn, 1832)	Kaçanik, Sazli (Stojićević 1929), Mt. Kopaonik (Drensky 1936)
82	<i>Pellenes nigrociliatus</i> (Simon, 1875)	Prizren (Stojićević 1929)
83	<i>Philaeus chrysops</i> (Poda, 1761)	Mt. Kopaonik (Drensky 1936)
84	<i>Salticus scenicus</i> (Clerck, 1757)	Mt. Kopaonik (Drensky 1936)
85	<i>Sitticus pubescens</i> (Fabricius, 1775)	Nerodime (Stojićević 1929)
86	<i>Sitticus saxicola</i> (C.L. Koch, 1846)	Mt. Kopaonik (Drensky 1936)

berg Research Institute for providing laboratory facilities during this study; Julia Altman gave technical support during identification work. Dr. Christo Deltshvè kindly revised this paper. We are grateful to Dr. Jason Dunlop who checked the English of this paper. We express our sincere acknowledgements to Theo Blick, Dr. Ambros Hänggi and Dr. Oliver-David Finch who provided important suggestions on the typescript. The German Academic Exchange Service (Deutscher Akademischer Austauschdienst, Bonn) supported B.V. with a three month visit in the Senckenberg Research Institute.
